

Compression Set with Thickness Regulation

Compression Set device with distance between the plates regulable between 0 and 20 mm.

Instrument characteristics

Compression Set device made of tempered steel with distance between the plates regulable between 0 and 20 mm.

The instrument permits to set the distance between the plates using a thickness gauge (not included) and to fix the position of the plates using a double-ring system. After the regulation, several tests can be made without further regulation.

Standards the instrument complies with ISO 815, ASTM D 395, DIN 53 517

Thickness regulation Between 0 and 20 mm

Usable test area Diameter 150 mm

External Dimensions Diameter 200 mm, thickness 120 mm

Weight 4,5 kg
